Instant, online access to full-image newspapers in microfilm

In most libraries, viewing recent full-image newspapers in microfilm can be limited to onsite, individual access on a single microform reader.

ProQuest Digital Microfilm™ minimizes the need for a single-user microform reader, by offering select local and national Newspapers in Microform online, where they can be accessed simultaneously and remotely by multiple users. Featured key titles include: *The New York Times*, *The Boston Globe*, *Washington Post*, *Chicago Tribune*, *Los Angeles Times*, and leading financial newspapers such as the *Wall Street Journal*—with many, many more on the way.

Full Image: Just like traditional microform versions, all of the newspapers are browsable, uncut and in full image—complete with editorials, photos, charts, graphs, and other visual material.

Supercharge usage while saving money, space, and time

Online Viewing: Extend your Newspapers in Microform subscriptions beyond library walls to many times more users than before, supercharging usage and your return on investment.

Financial Savings: Online access to your subscribed Newspapers in Microform translates into real savings on replacement reels and microform equipment maintenance costs.

Space Savings and Permanence: A perpetual archive license guarantees ongoing access to all titles for each subscribed volume year—without the physical storage. You can also opt to include traditional microfilm with your Digital Microfilm™ subscriptions for a completely secure and permanent solution.

Time Savings: ProQuest scans and hosts a continually expanding list of newspaper titles from its extensive Newspapers in Microform program for convenient online viewing and remote access—so you won't have to spend time investigating scanning permission.
