

ProQuest Digital Microfilm™

ProQuest®
Start here.

For remote, unlimited-user access to Newspapers in Microfilm, start here.

In most libraries, viewing recent full-image microfilmed newspaper content can be limited to onsite, individual access on a single microfilm reader.

Overcome the individual access barrier with ProQuest Digital Microfilm™—a new remote access microfilm viewing solution. Using Digital Microfilm™, an unlimited number of users are able to simultaneously view high quality digital scans of current newspapers in microfilm—giving researchers anytime, anywhere online access to a growing list of key titles including *The New York Times*, *Washington Post*, *Los Angeles Times*, and *Chicago Tribune*.

No microfilm equipment required!

Now libraries and their users can have all of the same benefits of traditional microfilm with an easy-to-use online microfilm viewing application that includes:

Remote Access: Extend microfilm content beyond library walls to many times more users than before, yielding a tremendous increase in usage and return on investment.

Full Image: The newspaper in its original and uncut format, complete with photos, charts, graphs, editorials, and other visual material.

Ownership: Expand your library's permanent microfilm holdings with the benefit of digital access. Ownership includes an archival microfilm copy of your Digital Microfilm™ titles.

Space, Time, and Financial Savings: Reduce film damage and loss as well as the need to use and maintain microfilm readers/printers. ProQuest scans and hosts a growing list of microform newspapers for online viewing and remote access. So with the Digital Microfilm™ solution, you won't need to investigate scanning permission or need additional computing resources.
